

Large Rope Igloo with Tunnel

Large Rope Igloo with Tunnel

This large rope igloo features five rope climbing nets and a large central tunnel, complemented by two sets of suspended balance stones. The product is made of galvanised steel with a high-quality powder-coated finish; joints are made of stainless steel and covered with plastic protective caps to increase the safety and service life of the connections. The ropes are made of polyester fibers with a steel core, wound around the center. This rope construction increases its strength and resistance to mechanical stress. Polyester itself offers many beneficial properties: it is resistant to microorganisms and weathering, dries quickly after rain, is colorfast, and features high strength.

Specifications

The Large Rope Igloo with Tunnel is certified according to STN EN 1176

Age Group:	3-14 years
Product Dimensions:	6.60 x 6.30 x 2.20 m (L x W x H)
Max. Fall Height:	up to 2.20 m
Safety Surfacing Area:	Ø 10.10 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, HDPE, HPL, polypropylene rope, stainless steel fasteners
