

Five-Tower Play Structure

Five-Tower Play Structure

A five-tower combined play structure. The central tower with a roof and four low towers are connected by a rope bridge, a rope balance bridge, a diagonal rope wall, and a tunnel. The structure includes steps, a sloped climbing wall, a vertical climbing wall, a sloped climbing net, a vertical climbing net, and three slides. The green-brown, nature-inspired design invites children to play from a distance. The HPL panels used are chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This prevents children from being injured by sharp edges or splinters. The posts are made of BSH laminated timber beams treated with a coating resistant to weathering and UV radiation. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and offers high strength. All joints are made of stainless steel and covered with plastic protective caps for increased durability and safety.

Specifications

The Five-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	8.00 x 5.80 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	11.40 x 8.80 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
