

## Single-Tower Play Structure

Single-Tower Play Structure

A single-tower combined play structure - a tower with a small roof that children climb via steps and descend from using the slide. Children can also play in the tunnel located beneath the tower. The green-brown design, inspired by nature, invites children to play from a distance. The HPL material used is chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and shatter-resistant. This eliminates the risk of injury from sharp edges or splinters. The posts are made of BSH beams treated with a weather-resistant and UV-resistant coating. All joints are stainless steel and covered with plastic protective caps to increase durability and safety.

### Specifications

The Single-Tower Play Structure is certified according to STN EN 1176

|                               |                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Age Group:</b>             | 3-14 years                                                                                                                  |
| <b>Product Dimensions:</b>    | 3.20 x 1.10 x 3.20 m (L x W x H)                                                                                            |
| <b>Max. Fall Height:</b>      | up to 0.99 m                                                                                                                |
| <b>Safety Surfacing Area:</b> | 6.50 x 4.00 m (according to STN EN 1176-1)                                                                                  |
| <b>Materials:</b>             | Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, stainless steel fasteners |
