

## Double-Tower Play Structure

Double-Tower Play Structure

This double-tower combined play structure features two low towers connected by a tunnel. Children can climb up via steps or a climbing wall with handholds, and descend via the slide. The green-brown, nature-inspired design invites play from a distance. The HPL material used is chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This prevents injury to children from sharp edges or fragments. The posts are made of BSH laminated timber beams treated with a weather- and UV-resistant coating. All joints are stainless steel and covered with plastic protective caps for increased durability and safety.

### Specifications

The Double-Tower Play Structure is certified according to STN EN 1176

|                               |                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Age Group:</b>             | 3-14 years                                                                                                                  |
| <b>Product Dimensions:</b>    | 3.50 x 2.80 x 2.00 m (L x W x H)                                                                                            |
| <b>Max. Fall Height:</b>      | up to 0.99 m                                                                                                                |
| <b>Safety Surfacing Area:</b> | 6.50 x 6.10 m (according to STN EN 1176-1)                                                                                  |
| <b>Materials:</b>             | Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, stainless steel fasteners |
