

Double-Tower Play Structure

Double-Tower Play Structure

This double-tower combined play structure features a tall tower with a small roof and a lower tower connected by a tunnel. Children can climb onto the structure via one of two climbing walls with handholds, a climbing net, or a ladder, and descend via one of two slides. The green-brown, nature-inspired design invites children to play from afar. The HPL material used is chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This eliminates the risk of injury to children from sharp edges or splinters. The posts are made of glue-laminated timber (BSH) beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical stress. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and features high strength. All joints are made of stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Double-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	4.80 x 3.00 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	8.10 x 6.30 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
