

Double-Tower Play Structure

Double-Tower Play Structure

This combined double-tower play structure features one tower with a roof and a second, lower tower, connected by a tunnel. Children can climb up via the climbing wall with handholds, the arch rope net, or the ladder climber, and come back down via the slide or the climbing pole. The green-and-brown design, inspired by nature, invites children to play from a distance. The HPL material used is chemically resistant, UV-resistant - colorfast, non-toxic, recyclable, and resistant to breakage. This eliminates the risk of injury from sharp edges or splinters. The posts are made of glue-laminated timber (BSH) beams treated with a weather- and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is colorfast, and features high strength. All joints are made of stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Double-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	4.50 x 1.60 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	7.90 x 4.70 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
