

Double-Tower Play Structure

Double-Tower Play Structure

A combined double-tower play structure featuring a low tower and a tall tower with a roof, connected by a tunnel. Children can climb up via a climbing wall with handholds, a ladder, steps, or an arch rope net, and come back down via one of two slides. The green-brown design, inspired by nature, invites children to play from a distance. The HPL panels used are chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This means there is no risk of injury from sharp edges or splinters. The posts are made of BSH beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and offers high strength. All joints are stainless steel and covered with plastic protective caps for increased durability and safety.

Specifications

The Double-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	4.80 x 3.20 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	8.10 x 6.50 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
