

Triple-Tower Play Structure

Triple-Tower Play Structure

Triple-tower combined play structure - two towers are connected to a tall tower with a roof by a rope bridge and a tunnel. Children can climb onto the structure using steps, a vertical climbing wall with handholds, or a climbing net, and can descend via one of three slides. The green-brown, nature-inspired design invites children to play from a distance. The HPL material used is chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This eliminates the risk of injury to children from sharp edges or splinters. The posts are made of BSH beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical stress. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is colorfast, and features high strength. All joints are made of stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Triple-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	5.80 x 3.20 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	8.90 x 6.60 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
