

Triple Tower Play Structure

Triple Tower Play Structure

A combined triple-tower play structure arranged in an L-shape. Two towers are connected to the central tower, which features ramparts, by a rope balance bridge and a tunnel. Children can climb onto the structure via steps, a sloped climbing wall with handholds, or a ladder, and descend via one of two slides. The green-brown design, inspired by nature, invites children to play from a distance. The HPL panels used are chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage, so there is no risk of injury to children from sharp edges or splinters. The posts are made of glulam (BSH) beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and features high strength. All joints are made of stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Triple Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	5.60 x 5.40 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	8.90 x 8.80 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
