

Triple-Tower Play Structure

Triple-Tower Play Structure

A triple-tower combined play structure in an L-shaped layout. Two towers are connected to a central tower with battlements by a rope bridge and a tunnel. Children can climb up via steps, a sloped climbing wall with handholds and rope, or a climbing net, and come back down via one of three slides. The green-brown, nature-inspired design invites children to play from a distance. The HPL panels used are chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage, eliminating the risk of injury from sharp edges or splinters. The posts are made of BSH beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and offers high strength. All joints are stainless steel and covered with plastic protective caps for increased durability and safety.

Specifications

The Triple-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	5.60 x 5.10 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	8.90 x 8.50 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
