

Triple-Tower Play Structure

Triple-Tower Play Structure

This triple-tower combined play structure is arranged in an L-shape. Two towers with a small roof are connected to a central tower by a diagonal rope climbing wall and a tunnel. Children can climb onto the structure via steps, a sloped climbing wall with handholds, a climbing pole, or a ladder, and come back down using the climbing pole or one of the two slides. The green and brown design, inspired by nature, invites children to play from a distance. The HPL panels used are chemically resistant, UV-resistant - colorfast, non-toxic, recyclable, and resistant to breakage. This eliminates the risk of injury to children from sharp edges or splinters. The posts are made of BSH (glued laminated timber) beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is colorfast, and offers high strength. All joints are made of stainless steel and covered with plastic protective caps for increased durability and safety.

Specifications

The Triple-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	3.90 x 5.40 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	7.00 x 8.80 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
