

Seven-Tower Play Structure

Seven-Tower Play Structure

A seven-tower combined play structure. The main tower with a small roof and six lower towers are connected by a rope bridge, a rope balance bridge, a diagonal rope wall, and tunnels. The structure includes steps, a sloped climbing wall with rope, a vertical climbing wall, a sloped rope net, a counting abacus, a tic-tac-toe panel, and five slides. The green-brown, nature-inspired design invites children to play from a distance. The HPL material used is chemically resistant, UV-resistant - color-stable, non-toxic, recyclable, and resistant to breakage. This eliminates the risk of injury to children from sharp edges or splinters. The posts are made of laminated timber (BSH) beams treated with a weather-resistant and UV-resistant coating. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is color-stable, and is characterized by high strength. All joints are made of stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Seven-Tower Play Structure is certified according to STN EN 1176

Product Dimensions:	8.10 x 9.40 x 3.20 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	11.40 x 13.00 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
