

Wooden Single-Tower Play Structure

Wooden Single-Tower Play Structure

A single-tower combined play structure - a tower that children climb using a ladder or a rope climber, with a slide providing a fun route back down. The green-and-brown design, inspired by nature, invites children to play from a distance. The HPL material used is chemically resistant, UV-resistant - colorfast, non-toxic, recyclable, and resistant to breakage. This prevents injury to children from sharp edges or splinters. The posts are made of BSH beams treated with a coating resistant to weathering and UV radiation. The ropes are made of polyester fibers wound around a central reinforcement. This rope construction increases its strength and resistance to mechanical wear. Polyester itself is resistant to microorganisms and weathering, dries quickly after rain, is colorfast, and is characterized by high strength. All joints are stainless steel and covered with plastic protective caps to increase durability and safety.

Specifications

The Wooden Single-Tower Play Structure is certified according to STN EN 1176

Age Group:	3-14 years
Product Dimensions:	2.80 x 0.90 x 2.00 m (L x W x H)
Max. Fall Height:	up to 0.99 m
Safety Surfacing Area:	6.00 x 4.00 m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, PA, HPL panels min. thickness 6, 10, and 13 mm, HDPE plastic, polyester ropes, stainless steel fasteners
